

Occupational Therapy Services

Occupational Therapy (OT) services address physical, psychological, and social factors impacting a child's functional performance in everyday roles, or "occupations." An OT provides a comprehensive evaluation of a child's ability to complete self-care, play, and academic skills at an age-appropriate level. Treatment plans are developed in collaboration with the child and family to meet individual needs. Treatment may incorporate both group and individual sessions, based on the environment best suited for the child and his or her therapy goals.

OT services focus on improving each child's overall role performance by providing assessment and treatment in the following areas:

- Self-care skills
- Academic based skills
- Work and volunteer preparation and participation
- Home management and community living skills
- Fine and gross motor skills
- Visual motor and visual perceptual skills
- Bilateral coordination
- Functional strength
- Sensory processing and integration
- Self-regulation strategies
- Safety awareness and problem-solving
- Sequencing and organization
- Attention
- Environmental adaptations and compensatory strategies

The goal of our therapy services is to promote the highest level of independence for your child to be successful at home, school, and in the community.

ALL ABOUT
SPEECH & LANGUAGE

We look forward to providing care to your family member. For any questions or concerns, please feel free to contact us.
